

Miguel Ángel Mialdea

Senior Android Engineer · Kotlin · Jetpack Compose · KMP

Valencia, Spain (remote) · miguelmialdeamonzo@gmail.com · miguelmialdea.dev · linkedin.com/in/miguel-mialdea-dev · github.com/MiguelMialdeaDev

SUMMARY

Senior Android Engineer with **5+ years of experience** (since March 2021) designing, building and optimizing native applications, focused on the **Fintech** industry — banking and digital payments used across multiple countries. Expert in advanced asynchronous concurrency with **Kotlin Coroutines & Flow** and rigorous **Clean Architecture / MVVM / MVI**. I own critical engineering initiatives end to end: large-scale test refactoring, multi-country extensible architectures, accessibility, and lately **AI-powered application development**.

EXPERIENCE

Senior Android Engineer · Globant

2023 — Present · Remote, Spain

Santander & Openbank projects · internal AI initiative · digital payments division

- ▶ **Multi-country extensibility (Openbank):** engineered configuration within the payments repository to reach 100% country extensibility, standardizing the codebase and enabling fast adaptation to new geographical markets.
- ▶ **Large-scale testing optimization (Santander):** led the full migration of **3,000+ unit tests** from JUnit 4 to JUnit 5, significantly improving build and compilation speed for the whole team.
- ▶ **AI & multimedia:** currently building applications for an internal AI initiative; previously shipped complex video-streaming functionality for an internal product.
- ▶ **Accessibility:** worked in the dedicated a11y team, adapting screens and UI components to meet accessibility standards.
- ▶ Implemented features across all architectural layers (data, domain, presentation) in a high-stakes digital payments environment.

Android Developer · Rudo (Laberit)

Mar 2021 — 2023 · Valencia, Spain

Green-field products & client technical consulting

- ▶ **Full-cycle green-field (Hidroten):** owned the entire lifecycle of a factory inventory application — architecture definition, UI, core business logic with SOAP integration, and client-facing bug resolution.
- ▶ **Technical consulting (Loterías Castillo):** architected and built the MVP demo, managing technical communication with the client directly.
- ▶ Collaborated with the international Santander team (Poland) on bug fixing; resolved issues for the El Pibe food-delivery app.

Independent Product Engineering

Ongoing · side projects

- ▶ **Jarvis — self-hosted AI assistant platform:** LLM agent orchestration over real tools (tasks, calendar, data pipelines), real-time web HUD, voice interface and offline-first PWA. Python / FastAPI / asyncio / Claude Agent SDK.
- ▶ **Web studio for local businesses:** design-to-production websites shipped in days, including client management end to end.

TECHNICAL SKILLS

Languages Kotlin (5+ y) · Java

EDUCATION

UI	Jetpack Compose · Compose Navigation · XML · Material 3 · Accessibility
Architecture	Clean Architecture · MVVM · MVI · Hilt · Koin · KSP
Concurrency	Coroutines · Flow · advanced threading
Data / API	Room · Retrofit · REST · SOAP
Quality	JUnit 4/5 · test coverage · Baseline Profiles · Macrobenchmark
Cross-platform	Kotlin Multiplatform · Compose Multiplatform
Tooling	Git · Gradle · CI/CD (GitHub Actions) · Play Store publishing
Specialties	Fintech (payments/banking) · AI app development · video/multimedia
